Magellan celebrates its 3rd Anniversary in Style

The local computer environment cleaning company, Magellan Facilities Services, based in Everlange, has just celebrated its 3rd anniversary in an event at Match Niederaanven.

The choice of venue was driven by the fact that Magellan had teamed up with Tesla cars to put on a drive experience of their model S85, a 5/7 seater electric vehicle with supercar performance (0-100 kph in 3.9 secs) and a range of over 400 km.

The Luxembourg Chronicle spoke to Magellan Managing Director Marc Faust, who declared himself very happy with the way the company has developed in its first 3 years. He pointed to the strengths that the company has, particularly its unique position as the only local company that does the highly specialised work of micro cleaning technical environments such as computer and telecom rooms. This is a highly meticulous process, and prior to Magellan's presence in the market, such cleaning, essential to the protection of sensitive computer equipment from dust and other micro organisms, had to be organised with teams coming from Brussels or beyond, with considerable extra costs involved. Mr. Faust also proudly spoke of the exceptional quality of his staff, and the service that they enable his company to provide to the market in Luxembourg and the greater region.
